

▶ Gain full control over Privileged Access

▶ Enforce least privilege to reduce costs, ease daily burdens on IT teams and end users, accelerate compliance, and strengthen security.

## Fortify your defenses before they're breached

Uncontrolled admin privileges, slow elevation requests, and scattered approval processes aren't just inconveniences—they're security gaps waiting to be exploited.

### Facing these challenges?

#### Local admin account & password oversight

- Who has local admin accounts across your environment, and who's managing their passwords?
- Are you certain they're secured and not being misused?

#### Inefficient user elevation

- How long does it take to grant elevated rights, and how often is this process interrupting workflows and productivity?

#### Cyber insurance & compliance risks

- Are uncontrolled admin credentials and weak privilege policies jeopardizing insurance coverage or slowing down audits?

#### Fragmented approvals

- Could consolidating all elevation and admin requests into a single platform simplify your processes?

### How ScreenConnect Privileged Access eliminates complexity and risk:

#### Automated least-privilege enforcement

- Ensure users have only the permissions they need—nothing more.
- Reduce overhead costs by streamlining approval workflows.

#### One-time administrator login

- Grant admin-level access without exposing credentials.
- Improve security by closing the door on password compromises.

#### Automated elevation management

- Approve, escalate, or deny access requests based on predefined policies.
- Reduce delays, maintain productivity, and leverage customizable rules for automatic approvals and elevation.

#### Centralized visibility & control

- Integrate seamlessly with ScreenConnect™—leveraging the same single agent for both remote support and privileged access—plus ConnectWise RMM™, ConnectWise PSA™, Slack, Teams, and VirusTotal.
- Fast-track compliance by generating detailed, automated audit reports.

#### Empower users, lighten IT's load

- Let employees do their jobs without unnecessary barriers.
- Reduce IT/desktop support effort by minimizing wait times and repetitive support tickets.
